

## + summary

I am a back-end focused developer with a joy for building simple-to-use but robust web applications. I aim to continue to creating new websites and applications that allow their users to use technology to its full effectiveness. When I'm not developing, I can usually be found hanging with my pets, out on an adventure with friends, joining my usual crew in the latest online gaming adventure.

## + projects

### Filmstreams Student Night (Ruby, Rails, PostgreSQL)

Application used by Filmstreams Movie Theaters in Omaha, NE to maintain events for their monthly free movie night for students. As an equal member of a three person team we developed the 2.0 version of this application building off the changes requested by the client from a previous team's build as well as performing routine maintenance to the application and refactoring previous work. The application is built entirely in a Ruby on Rails MVC framework with a PostgreSQL database for data management.

## + employment

### Nelnet

Lincoln, NE

Advisor

Jan 2015 to Aug 2016

In this position, I performed inbound customer service for federal student loan borrowers whose loans were serviced by Nelnet. Based on my ability to quickly and efficiently handle these calls I was also cross trained to handle calls from a number of Nelnet's other business segments and departments including their line for military service members and FACTS Management, a company that primarily provides tuition repayment plans for private schools and institutions at all levels of education. My most proud achievement in this position was leading my team in overall productivity (based on calls taken, after call work, average handle time, and quality check performance) in February of 2015 and being in the top 3 for 6 months.

### Express Employment Professionals

Lincoln, NE

Advisor I

Aug 2014 to Jan 2015

This position was a temporary employment opportunity at Nelnet through Express Employment. In this position, I handled inbound customer service calls for borrowers in Nelnet's federal student loan portfolio. Unlike the later full time position with Nelnet, in this position my calls were limited to the main student loan servicing lines of business. My day to day job consisted of assisting borrowers to seek out the best options for repayment or postponing payments on their student loans as well and walking them through any questions they may have concerning the intricacies of federal student loans. The most proud moment in this position came the day that I received the offer from Nelnet to be hired on as a full time employee.
